

GEC FOCUS

Barne's Solids Handling Pumps

SHV submersible solids handling pumps utilize vortex impellers for outstanding clogging resistance from stringy solids. The combination of inverter duty rated motors and steep performance curves make them ideal for variable speed operation. The external coating system provides corrosion resistance designed specifically for wet well application. Motors range from 7.5 to 30HP at 3450 RPM.

These pumps are commonly found in applications involving sewage, effluent, wastewater processing and solids laden media. Available in both standard and explosion proof configurations

Barnes solids handling pumps are constructed of durable cast iron with oil-filled motors to provide a pump tough enough to meet most application needs.

Designed for:

- Solids handling with less clogging
- Variable frequency drive
- Longer mechanical seal life
- Longer bearing life
- Tough wet well environments

Web Site News

Glauber Equipment Corporation would like to announce that it has added two new features to the Glauber website over the past several months.

First, check out the **Reduced Stock Pricing** page! Several of our never been used, in-stock units will be showcased here every month at a special reduced price. There are a wide variety of units available including Atlas Copco rotary screw air compressors and refrigerated dryers, a precision water chiller manufactured by Parker Domnick Hunter and WEMCO brand pumps.

For more information contact GEC Sales at 888-GLAUBER or 716-681-1234

The second addition is our **Customer Testimonials** page. Here we have statements from individuals who have had dealings with Glauber Equipment. At Glauber

we are the outstanding blower, compressor and pump resource in New York State.

Visit our website to see the full line of specially priced units and testimonials.

Glauber Equipment is the premier supplier of pumps, compressors, blowers, after-market parts and other services in New York State. Founded in 1960 by Paul Glauber we have years of experience in designing and building custom fabricated packages, pump systems, compressed air systems and more. It is our mission to be the outstanding blower, compressor and pump resource in New York State. We believe the best way to achieve that goal is to provide exceptional service and value to our customers.

www.aodparts.com is Glauber Equipment's tool for providing customers with an easy interface to order after-market pump parts. To help celebrate another year of success with our aodparts website we would like to offer 5% off any purchase of \$50 or larger through the website interface. When placing your order, include "parts2010" in the comments section and we will deduct 5%

For a limited time only!

5% off any purchase over \$50.00 from our aod parts website

ConservAIR Sequence Masters

On December 18th, 2009 Pneumatech launched their new line of ConservAIR Sequence Masters. There are three versions available. The SM-500 is a lead/lag, two compressor control that is simple and great for reducing energy consumption. The SM-1000 is a two to eight compressor controller with a touch screen interface and basic trending capabilities. The third model, SM-4000, is a customer controller with unlimited capabilities. It works with any type of compressor and integrates into most plant automation software systems with unlimited monitoring, trending and reporting.
